

Technical Information

Clarity™

Description: Provides and maintains clear pond water

Type: Water Conditioner

- Main Points:**
- Clears Green or Muddy Water without dangerous algaecides
 - Environmentally responsible
 - Safe for your fish and plants
 - Phosphate and Nitrate free
 - Treats 10,000 gallons

Description: Oase® Clarity™ produces and maintains crystal clear pond water without affecting pH balance. Safe for all pond fish and plants. Will not cause suffocation of fish, due to gills sticking together, as competing products can. Contains no phosphates, nitrates, or silicates to cause undesirable algae or slime growths. Contains no poisonous algaecides, as competing products do. 100% biodegradable.

Directions: Dilute one to five teaspoons (capfuls) or 5 to 25 ml per 100 gallons (378 liters) of pond capacity in a gallon of water and evenly disperse around edge of pond. Precipitated particles should be removed by a properly working mechanical filter and fine filtering medium, such as filter floss, sponge or they may be siphoned out. Allow 8 hours before siphoning.

Considerations for use: Oase® Clarity™ is not an algaecide, but a long chain polymer which attracts algae, dirt, bacteria and other organic materials into clumps which are easy to filter out or will settle to the bottom of the pond where they may be siphoned out.

For best results, use a fine filter floss or pad filter and force water through it. Dirt and algae will collect on this filter and can be discarded.

Determine the amount of Clarity™ to use by how cloudy the pond appears, and by what method the product will be used. If using a fine floss filter, use at the lower dose. If trying to flocculate, use the higher dose. Do not use the higher dose more than once each week or exceed 5 capfuls per week per 100 gallons.

If the pond is heavily loaded with fish and plants and has not had proper water changes, use Oase® CleanPond™ first, to lower the organic loading in the system. Then, wait one day before using this product.

Contents: Deionized water, polyelectrolytes

Precautions: Not for human consumption. Not for fish used for human consumption. For ornamental pond use only! Do not use in natural bodies of water! Keep out of reach of children!
