

# Technical Information

## Water Prep™

Description: Chlorine & Heavy Metal Neutralizer

Type: Water Conditioner

- Main Points:
- Instantly **neutralizes chlorine** to make water safe
  - Phosphate and Nitrate free
  - Professional Quality, returns water to a natural state!
  - Ecologically Responsible
  - Treats 7,500 gallons

**Description:** Use this product if your water contains only chlorine. (Use OASE® Water Prep Plus™ instead of this product, if your water contains chloramine!) Instantly "ages" tap water, allowing immediate addition of water to pond. Water-Prep™ makes water safe for pond fish and plants.

**Directions:** Add one teaspoon (5ml) per 75 gallons (283 liters) of tap or pond water to neutralize chlorine and heavy metals.

**Considerations for use:** During hot summer months, water departments use heavy amounts of chlorine to kill bacteria. Unfortunately, hot summer months also cause increased evaporation in the pond. Use two to four times the recommended amount of OASE® Water Prep™ if you can smell the chlorine from your tap!

When first starting a new pond or introducing new animals, it is a good practice to use Oase® Koi Shield™ to provide stress relief and guard against parasites.

**Contents:** Deionized water, Sodium Thiosulfate, stabilizers.

**Precautions:** Not for human consumption. Not for fish used for human consumption. Do not use in natural waters! Keep out of reach of children!
